Mr. Sergei Levteev
Chief Executive Officer
International Business Alliance (IBA)

Dear Mr. Levteev,

Since August 2011, IBA has been executing a project on the implementation of an automated system to manage maintenance and repair operations at Interregional Distributive Grid Company of Urals (IDGC of Urals). To date, the following stages of the project using SAP ERP 2005 are completed:

- Conceptual design
- Development and testing
- Test production.

In addition, an application on equipment inventory was commissioned in May 2012.

The go-live operation of the entire maintenance and repair management system based on SAP ERP 2005 is scheduled for October 2012. Currently, the final training of the users is conducted.

The high competence of IBA specialists enabled them to perform the following tasks with high quality and within a limited time frame:

- Automate the basic SAP Equipment Maintenance (SAP EM) functionality and standard reporting
- Optimize business processes related to technical support and maintenance of equipment
- Effectively integrate EM functionality with the existing solution, the earlier jointly developed SAP ERP 2005 system that manages financial and economic operations at IDGC of Urals.

I would like to underscore the IBA's professionalism and excellent teamwork that are crucial for the quality and timely implementation of the project.

We look forward to further cooperation.

Sincerely,

Andrey Suslov
Director of IT Department
Interregional Distributive Grid Company of Urals
