Sergei V. Levteev  
Chief Executive Officer  
JV International Business Alliance (IBA)  
155, Bogdanovicha St., Minsk

I would like to express satisfaction with the performance of JV International Business Alliance (IBA) when implementing the SAP-based project Equipment Maintenance at the Locomotive Depot of the Minsk Branch of Belarusian Railway.

The system was implemented in two stages for the period of two and a half years. As a result of hard work, the system Equipment Maintenance was put into commercial operation in September 2010.

Today, the solution provides support for the maintenance and repairs of locomotives, and allows for the quality management of repairs, including monitoring of the technical state of diesel and electric locomotives and their parts. Equipment Maintenance enables Belarusian Railway to anticipate and plan needs in material resources based on actual expenditures, as well as control and analyze movement of material resources, track the execution of work online, and manage the entire process of locomotive repairs.

The installation of the EM terminals in the maintenance departments enabled our experts to track and confirm operations directly in the system, and receive online operational information, namely repair manuals, designs and technical specifications, safety instructions, and work history. Locomotive Depot employees are able to generate and maintain the Book of locomotive repairs, material status reports, job sheets, certificates, and other documents electronically.

In addition, the EM implementation reduced workload of the non-linear departments. The accounting department received automatic accounting of the materials used for repairs, while labor and wages department, automatic formation of orders.

We thank IBA for the successful implementation and look forward to further fruitful cooperation.

Alexander Gurshchenkov

Deputy Head of the Locomotive Depot  
Minsk Branch  
Belarusian Railway
